Cited document of particular relevance:

D1: US 5733124 A1

D1 shows a method for orienting a bridge in position relative to a dental implant with the aid of a spacer member. A first sleeve-shaped part (10, figure 7) included in the spacer member is brought into cooperation with the implant (114), and a second sleeve-shaped part (190, figures 11-12) is brought into cooperation with, on one hand, the first sleeve-shaped part and, on the other hand, with a fastening member in the bridge (180). The first and second sleeve-shaped parts are made to assume assembled positions when the bridge is anchored to the implants. Upon separation of the bridge from the implants, the first sleeve-shaped part maintains its position on the respective implant, and the second sleeve-shaped part follows along with the bridge.

The method according to claim 1 is therefore known from D1. Consequently, the invention defined in claim 1 lacks novelty and inventive step.

The arrangement according to claims 2-10 is also previous known from D1. Consequently, claims 2-10 also lack novelty and inventive step.

The invention is considered to be industrially applicable.
